Mr. Wallace Tharp
410 12th Street N.W.
Albuquerque, New Mex.

Dear Sir: My husband and I love dogs and have more than we should, in such a small pen. They are of mixed breed, and in all sizes.

We have always had a bad odor and fly problem until we began feeding Fossil Shell Flour. Within 36 hours, the odor was greatly reduced.

We feed about a tablespoon per day through the automatic feeders, and are very pleased with the results. Their coats just glisten, and their vitality is outstanding.

For a test, we quit feeding, and within 24 hours, the odor and fly problem was back. Again we added the Fossil Flour to their rations, and within 24 hours the odor and fly problem ceased to exist.

Before Fossil Shell Flour, we had worm problems, but not any more. We don't have to go through the miserable experience and expense of worming.

One of our Females had a litter and had more milk than you can imagine. She had been on Fossil Flour all her life and her puppies were exceptional.

One day we came home and found the dogs badly infested with fleas. Clusters were on their ears and around their eyes, so bad that there was bleeding. We treated them with Perma-Guard Pet powder and licked the problem. Within a week the sores were gone, causing us to believe that the product has some 'healing' power.

We freely recommend Perma-Guard products and you are welcome to use our letter in any way you wish.

Very sincerely,

Mr. & Mrs. G. W. Kuntz
